

What is claimed is:

1. A display system comprising:

a selection-purpose display medium used to select at least data; and

5 a contents-display-purpose display medium used to display a content of the data selected by the selection-purpose display medium.

2. The display system according to claim 1,

10 wherein at least one of data names and icon names is displayed on the selection-purpose medium; and

the content of the selected-data is displayed on the contents-display-purpose display medium.

15 3. A display system comprising:

a first display medium; and

a second display medium which is different from the first display medium in display principle.

20 4. The display system according to claim 3,

wherein one of the first display medium and the second display medium comprises a display medium having no memory characteristic; and

25 the other display medium comprises a display medium having a memory characteristic.

5. The display system according to claim 4,

wherein the display medium having no memory characteristic is employed as a selection-purpose display medium used to select at least data; and

the display medium having the memory characteristic is  
5 employed so as to display a content of the data selected by the selection-purpose display medium.

6. The display system according to claim 4, further comprising writing means for writing into the display medium,  
10 wherein the display medium having the memory characteristic is detachably mounted on the writing means.

7. The display system according to claims 1,  
wherein the selection-purpose display medium and the  
15 contents-display-purpose display medium are connected to each other in a two-page spread form.

8. The display system according to claims 3,  
wherein the first display medium and the second display  
20 medium are connected to each other in a two-page spread form.

9. The display system according to one of claims 1,  
wherein the selection-purpose display medium and the  
contents-display-purpose display medium are connected to each  
25 other in a foldable form.

10. The display system according to one of claims 3,  
wherein the first display medium and the second display  
medium are connected to each other in a foldable form.

5

11. A display method for a display system having a plurality  
of display media, comprising:

displaying information used to select data on a  
predetermined display medium;

10 accepting the selection of the data in accordance with  
the information displayed on the predetermined display medium;  
and

displaying a content of the data whose selection has been  
accepted on a display medium different from the predetermined  
15 display medium.

12. A display program for causing a computer to execute  
a process for displaying data by using a display system in which  
a plurality of display media are provided, the program causing  
20 the computer to realize the function of:

displaying information used to select data on a  
predetermined display medium;

accepting the selection of the data executed in accordance  
with the information displayed on the predetermined display  
25 medium; and

displaying a content of the data whose selection has been

accepted on a display medium different from the predetermined display medium.
